**Ipomea Paniculata**, called also by some *I. Mexicana*, is one of the best of the tuberous rooted Morning Glories. It forms large tuberous roots like Dahlias, requiring the same treatment in winter as Dahlias. The roots increase in size from year to year. Planted early in spring, it forms a strong vine from 20 to 30 feet high, beginning to bloom early and continuing to bloom until frost. The flowers are of a rich mauve color, about three inches in diameter. This plant is not so well-known as its merits justify. Regarding this very worthy specialty, it may not be amiss to say that at every place where it was used last year it gave perfect satisfaction, fulfilling every promise we had made for it.

The following expression from Mr. Falconer, under date of October 2nd, speaks very plainly and honestly for the plant. He says: "Ipomea Paniculata did splendidly with me. It is, all points considered, the best of the genus for amateurs to grow. By lifting the tubers now and wintering them dry in the cellar as we do Dahlia roots and planting them outside in a warm aspect in May, they will grow and bloom beautifully all summer long. Ours are still, October 2, in perfect verdure and full of their reddish purple flowers."

Mr. F. E. Carr, Practical Landscape Gardener of West Cleveland, O., says: "I am glad you have strong plants of Ipomea Paniculata, I like them very much. The two small ones I got last year made a grand show. They went to the peak of the house and fell half way down again before frost came, and bloomed very profusely."

## CLIMBING VINES—Continued.

	Doz.	100	1000
WISTARIA.—American, 2 years, strong.....	1 25		
"    Magnifica, 2 years, transplanted, 1 to 2 feet.....	75	4 00	
"    "    3 to 4 years, transplanted, strong.....	1 00		

### HARDY, HERBACEOUS PLANTS, BULBS AND TUBERS.

ACORUS CALAMUS VARIEGATUS—Variegated Sweet Flag. One of the finest of all variegated foliage plants, flourishing on either dry or moist soil. Variegation always bright and distinct.....	\$ 2 00	\$	\$
ACHILLEA.—"The Pearl," open ground roots.....	1 00		
"    "    Rooted Cuttings, ready to pot.....	25	1 00	7 50
ASCLEPIUS TUBEROSA.—2 year seedlings, nursery grown.....	1 00	6 00

Water Hyacinth.—Home grown.....	75	5 00	

**HERBACEOUS PÆONIES.**

Of these hardy plants we have one of the best collections in the country, embracing about 200 beautiful named sorts. We can supply desirable collections to those who wish them. For prices see 3d page.

**NEW EARLY FLOWERING TUBEROSE, "ALBINO."**

The characteristics of this early flowering single white Tuberoses are such as to make it most popular. The petals recurve gracefully, which adds greatly to the size of the individual flower. The flower spike is very large and evenly filled. It blooms about 30 days earlier than the ordinary kinds. Each bulb produces from two to five flower stems, a very unusual thing, and these stems are frequently branched, but its great merit above all other Tuberoses is that it is entirely free from the brown tint common to the old sorts on the back of the petals, the tube and expanded petals being of the finest waxy white, making this one of the most valuable plants ever introduced for cut flowers. For prices see 3d page.

**VARIEGATED LEAVED ORANGE FLOWERED TUBEROSE.**

The leaves of this variety are bordered with creamy white, making a handsome plant before blooming. The flowers are single, almost exactly like an orange bloom. The plants begin to flower very early. And the same bulbs bloom year after year. Smaller bulbs of this variety will bloom than of the older kinds.

◆ ◆ ◆  
**NEW  
HARDY  
HIBISCUS.**

**Crimson Eye.**—This grand hardy perennial Hibiscus is a robust grower with dark red stems and large foliage. The flowers are immense in size, often measuring 20 inches in circumference. The color is of the purest white, with a large spot of deep, velvety crimson in the center of each flower. It is a striking combination of color, and one that must be seen to be fully appreciated. A well-developed plant will produce several hundred of these flowers in a season. It will succeed anywhere, and is perfectly hardy, blooming the first year. See page 3.

**HIBISCUS--CRIMSON EYE.**

**"OHMER" BLACKBERRY.**

The Ohmer was introduced by, and named for, Nicholas Ohmer, of Ohio, the introducer of the Gregg Raspberry. I have fruited this variety for six years, in the same field with all the leading varieties of Blackberries, and it has uniformly excelled all others in size, beauty, quality and productiveness. The plants are as hardy as Snyder or Ancient Briton. "Hardy, healthy, very large; ripening after raspberries are gone, and lasting till late in August when prices are up. Excellent quality, firm, no core; sweet before fully ripe, which makes it superior to Lawton. Five points which recommend this berry: Hardy, late, large, productive and of the finest flavor. Mr. Ohmer also says brings \$1 to \$2 more a stand than Snyder or Taylor. As large as the largest, as hardy as any good berry; very productive, strong grower, finest quality and late."
